

SWINBURNE UNIVERSITY OF TECHNOLOGY

# Step 1, do no harm.... Thoughts on intrusiveness in network measurement

#### Grenville Armitage

garmitage@swin.edu.au

Centre for Advanced Internet Architectures (CAIA)
Swinburne University of Technology

### **Outline**

#### Do no harm

Observing & Sharing

Influencing while observing

Social expectations

## To measure is to meddle

"In the land of the blind, the one-eyed man is king." (Desiderius Erasmus)

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

2 3

#### To measure is to meddle

"In the land of the blind, the one-eyed man is king."

(Desiderius Erasmus)

- We do evidence-based based research, yes?
  - $\blacksquare \ \ \text{Hypothesise} \rightarrow$
  - Measure→
  - Know
- "belief without evidence" is unpalatable, so we measure

#### To measure is to meddle

"In the land of the blind, the one-eyed man is king." (Desiderius Erasmus)

- We do evidence-based based research, yes?
  - Hypothesise →
  - Measure →
  - Know
- "belief without evidence" is unpalatable, so we *measure*
- Someone will find your measurements to be
  - intrusive...
  - unwelcome...
  - meddlesome...

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

#### 2

## The problem with "other people"

Other people make the most interesting test subjects

(and yet)

 Capturing, recording and analysing what other people do (or own) is fraught with pitfalls

# Consequences in every corner

## "Curiosity killed the cat"

- Taking measurements
  - ...may alter observed system or end-user behaviours
  - ...may violate social expectations

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

\_

## Consequences in every corner

#### "Curiosity killed the cat"

- Taking measurements
  - ...may alter observed system or end-user behaviours
  - ...may violate social expectations
- Using measurements
  - ...may reveal unpopular or unauthorised insights

## Consequences in every corner

#### "Curiosity killed the cat"

- Taking measurements
  - ...may alter observed system or end-user behaviours
  - ...may violate social expectations
- Using measurements
  - ...may reveal unpopular or unauthorised insights
- Sharing measurements
  - ...wider analysis → more scientific credibility
  - ...increased risk of measurement data leakage

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

## Step 1, do no harm

- Categories of consequences:
  - Operational (acquisition of accurate observations)
  - Social (clashing with other people's expectations)
  - Political (getting permission 1<sup>st</sup>, 2<sup>nd</sup>, N<sup>th</sup> time....)
  - Legal (your plans might simply be illegal)

## Step 1, do no harm

- Categories of consequences:
  - Operational (acquisition of accurate observations)
  - Social (clashing with other people's expectations)
  - Political (getting permission 1<sup>st</sup>, 2<sup>nd</sup>, N<sup>th</sup> time....)
  - Legal (your plans might simply be illegal)

As evidence-based researchers we should carefully consider how to minimise these consequences

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

#### **Outline**

Do no harm

#### Observing & Sharing

Influencing while observing

Social expectations

#### Observer effect

#### Measurement impacts the system under observation

- "physical" examples include:
  - Electrical measurements draw finite power
  - Network measurements require CPU time slices
  - Data logging requires I/O bus activity
  - ....
- "social" examples include:
  - Diluting the observed's sense of privacy
  - The observed alter their behaviours
  - ....

(cf. Uncertainty principle: Observer effect at quantum levels)

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

#### 8

# Sharing: Benefits vs Chilling effects

- Observe then share → Virtual Observers
- Benefits
  - Observer effect is reduced (amortised over recipients)
  - "Many eyes" may discover new phenomena

## Sharing: Benefits vs Chilling effects

- Observe then share → Virtual Observers
- Benefits
  - Observer effect is reduced (amortised over recipients)
  - "Many eyes" may discover new phenomena
- Risks
  - Potential for leaks is multiplied
  - Anonymisation not tested against attacks
- Chilling effects
  - Casual/careless de-anonymisation attempts
    - $\rightarrow$  poison the future good-will of data owners

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

9

#### **Outline**

Do no harm

Observing & Sharing

#### Influencing while observing

Social expectations

#### Passive observations

- Physical intrusion
  - passive fibre tap (miniscule energy draw)
  - active tap (regenerates tapped signal)
- Network port/interface monitoring
  - Mirror ports (an active tap at a higher layer)
  - Listening to WiFi transmissions (broadcast or otherwise)
- Instrumentation, logging system state
  - Packet timestamps, payloads, aggregate rates, instantaneous CPU loads, queue depths...

Requires local access to observation point, and we only learn what existing traffic patterns reveal

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

. .

#### Active observations

- Direct engagement with observed system or network
- Probing
  - Scattered (background) probes connectivity mapping
  - Sustained (bursty) probes service characterisation
  - **...**
- User-triggered testing ("drive-by testing")
  - scripts embedded in web page, tickling wireless devices
  - ...

(Remote) traffic injection so we can observe system response to externally imposed conditions or stimulii

## And others are watching....

- Do your measurement activities look malicious?
  - False-positives in IDS or anti-DoS systems
  - Prelude to identity theft
  - Appearance of doing a vulnerability analysis
- Is your anonymisation secure?

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

10

## Is it okay to briefly disrupt?

"Characterizing Residential Broadband Networks" http://conferences.sigcomm.org/imc/2007/papers/imc137.pdf

"At a high level, our technique is simple – we probe the broadband link with packet trains of different rates, using packets of various types and sizes. We use the responses received to infer a broad range of characteristics, ...."

# Stealth measurement – open gateways

- Carna Botnet, "Internet Census 2012" http://internetcensus2012.bitbucket.org/paper.html
  - Inject test code into vulnerable home gateways
  - Run probe tests from 420K locations
  - Restore home gateways to previous state

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

. \_

#### Stealth measurement – client browsers

- "Mitigating sampling error when measuring internet client IPv6 capabilities" (IMC 2012) http://www-net.cs.umass.edu/imc2012/papers/p87.pdf
  - Javascript/Flash embedded in web pages
  - Web sites cooperate (Google ads)
  - Browsers run tests from client locations

Do no harm

Observing & Sharing

Influencing while observing

#### Social expectations

Final thoughts

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

#### .\_

# People are strange creatures

- People often desire
  - Agency
    - Capacity to act in the world around us
    - Ablity to make choices
  - Awareness
    - Knowing what others know
    - Knowing what others are trying to know about us

(And often perception is reality)

## (Perception of) control

- Measurements create new knowledge / insights
  - Yet to have agency / awareness suggests a need to control data about oneself
- The observed might
  - not want you to know more
  - want some control over what you learn
  - want some control over what you do with the knowledge
- Laws: a social response to express this control

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

. . .

## Stealthy is fine, right?

- Is measurement okay if you don't disrupt:
  - the technical system/network?
  - the network/system operator's peace?
  - the observed's (perception of) agency or awareness?

## Real-world (privacy) laws

"Don't poke a sleeping lion" (a very wise person)

- Laws about technical observations pre-date The Internet
- Rule #1 don't assume
- Rule #2 get legal advice
- Different jurisdictions are.... different

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

\_ .

## Data sharing

- "You" need the help of two (overlapping?) communities
  - People whose behaviour is observed
  - People whose systems enable your observations
- Laws protect the former, the latter don't want to get sued
- Avoid poisoning relationships
  - Data minimisation how little do you need?
  - Data storage how secure?
  - Data obfuscation how secure?
  - Policies, procedures & agreements— transparent?

## The word on the Street (View)

- Step 1: Run around the world taking photos
- Step 2: Decide public WLAN packets are fair game
- Step 3: (accidentally) capture & store (partial) payloads
- Step 4: Spend years trying to shake off mud
  - "As of 2012, investigations have gone forward in at least 12 countries, and at least 9 countries have found Google guilty of violating their laws." http://epic.org/privacy/streetview/
  - US wiretap case (Joffe v. Google) to proceed (Sep 2013)

7th IEEE Workshop on Network Measurements 2013

http://www.caia.swin.edu.au

garmitage@swin.edu.au

October 24th 2013

#### **Outline**

Do no harm

Observing & Sharing

Influencing while observing

Social expectations

## Measurement is political & technical

- Respect the potential for legal complications
- Observe only what you need
- Secure your captured & shared data from leakage
- Nurture & protect relationships with network operators
- Avoid looking like an attacker or thief
- Minimise conflict with social expectations

7th IEEE Workshop on Network Measurements 2013 http://www.caia.swin.edu.au

garmitage@swin.edu.au
